#### HOW TO PLACE AN ORDER FOR VERANDA ROOF:

#### LEFT ELEVATION

#### RIGHT ELEVATION

1. Sketch plan & elevations.  
(If necessary, attach photos of existing property. Indicate on drawings if any part of project is existing).
2. Mark and caption the positions of all walls, brick piers, windows/doors, cut outs / intrusions.
3. Mark the preferred positions of any
  - a) roof windows
  - or b) rectangular glazed panels.
4. Upon placement of your Veranda Roof order, an order confirmation is generated which must be signed and emailed back.

## RULES FOR VERANDA ROOF

- i. Roofs are to be pre-erect.
- ii. Lead times on Veranda roofs are on 4 weeks from receipt of signed confirmation.
- iii. Confirmation from the customer on what is going underneath the eaves beam must be supplied to enable accurate structural stability.
- iv. If a customer is having full span bi-folding doors then the roof may require a goal post.
- v. Muntin bar is specified in the position between the CRN/2 and the eaves due to the uplift of the roof which may cause vibration to the glass and if in one piece it could shatter - if a customer requires another piece of muntin bar further up the roof this can be supplied in addition to the 1 piece.
- vi. We advise our customers to take the Veranda beam at 5 - 10 pitch - if they require a steeper pitch this is possible but an additional cost could be incurred for the special veranda end plates that have to be made on a job by job basis and also the CRN/2 cannot be used as the bars will clash with the top of this.
- vii. FFL (finished floor level) - we need to know that the customer is going to have to the external of the roof so that we can ensure that the support posts will work and be supplied to the correct length.
- viii. If the roof design incorporates a 90 return then the facet size and pitch will need to be the same - this is because the weld line for the Veranda beams needs to match.
- ix. If support posts need extending below FFL please state length required.
